ROLL NO: 240701359

NAME: Nikhil Vinayak P

USER INTERFACE AND DESIGN

Conduct task analysis for an app (e.g., online shopping) and document user flows. Create corresponding wireframes.

AIM:

To conduct task analysis for an online shopping application, document user flows, and create corresponding wireframes for improving user interaction and usability.

Task Analysis:-

Task Flow – EasyBus Application

The task flow diagram shows how a user books a bus ticket using the EasyBus application. It explains the steps from opening the app to getting a ticket with a QR code.

Step 1: Start and Open Application

- The user opens the EasyBus app on their phone. The system checks if they already have an account.

Step 2: Check for Existing Account

- The system asks if the user has an account.
- If they do they go to the Login Page.
- If they don't they go to the Sign Up Page.

Step 3: Sign Up Process

- New users enter their name, phone number, email and password to register. After registering they can log in.

Step 4: Login Process

- Users enter their username and password.
- If it's correct they go to the Homepage.
- If not they can reset their password.

Step 5: Reset Password

- Users can change their password by entering their new passwords.

Step 6: Homepage

- After logging in users see the EasyBus Homepage. They can view their account. Plan a trip.
- To book a ticket they enter their source and destination.

Step 7: View Bus List

- The system shows buses for the route.

Step 8: Select Bus

- The user picks a bus from the list.

Step 9: Seat Availability and Seat Selection

- The system shows seat availability. The user selects their seat.

Step 10: Proceed to Payment

- The user goes to the payment stage.

Step 11: Select Payment Method

- The user chooses from UPI, Credit Card or Wallet.

Step 12: Confirm Payment

- The user confirms their payment.

Step 13: Payment Successful

- The system shows a payment message.

Step 14: Ticket Generation and QR Code

- The system generates a ticket, with a QR code.

Step 15: Download Ticket

- The user downloads the QR ticket.

Step 16: End

- The booking process ends after the ticket is generated and downloaded.

WIREFRAME 1 – SIGN UP AND SIGN IN

The Sign Up and Sign In screen is the first screen users see when they open the EasyBus app. This screen lets new users create an account and existing users log in.

**State 1 – Sign Up :-**

On the Sign Up page, new users can register by entering their personal details. They need to fill in their Name, Phone Number, Email ID, and Password. After completing these fields, the user can click the Sign Up button to create an account. If the user already has an account, they can choose the Sign In option at the bottom of the page.

State 2 – Sign In:-

The Sign In page is for existing users to access their accounts. Here, users enter their registered email address and password to log in. Once they enter the correct details, the user is taken to the Homepage of the app. If the user forgets their password, they can select the Forgot Password option to reset it.

State 3 – Forgot Password:-

In this state, the user must enter their registered email address. After doing this, the system allows the user to move on to the password reset step.

State 4 – Reset Password:-

On the Reset Password page, the user types in a new password and confirms it by entering it again in the Confirm Password field. After submitting the new password, it updates successfully, and the user is taken back to the Sign In page to log in with the new details.

WIREFRAME 2 – HOMEPAGE

After signing in, the user is taken to the Homepage of the EasyBus application. This page is the main hub for planning and booking a bus ride. At the top of the screen, the title “EasyBus” appears. On the left side of the top bar, there is a menu icon that offers access to various app features. On the right side, a profile icon lets the user view their personal details and sign out of the application.

Menu Options:-

- When the user selects the menu icon, a list of options becomes available. These options include:
 - Settings
 - Notifications
 - Location Services
 - Invite Friends
 - Help
- In the Settings section, the user finds additional options such as:
 - Permissions
 - Push Notifications
 - Location Services
 - Sounds
 - Adds
 - Help
 - About Application
 - Send Feedback
 - Support
- These settings let the user personalize the application to fit their preferences.

Route Selection:-

In the center of the homepage, the user can plan their journey by choosing their travel route. Two input fields are provided:

- From – the starting location
- To – the destination location

After selecting the route, the user can continue with booking by clicking the Book Now button at the bottom of the screen.

WIREFRAME 3 – DATE SELECTION AND BOOKING SLOTS SCREEN

Once the user clicks the Book Now button on the homepage, they go to the Date Selection and Slot Booking screen.

Calendar Section:-

The screen shows a calendar interface where the user can pick their travel date. Multiple dates from different months appear in a clear calendar format.

Slot Selection :-

After choosing a travel date, the user can move to the Slots section. Here, available time slots for bus travel are listed. The user can pick the time slot that fits their travel plans.

Seat Booking :-

Once the user selects a time slot, they can choose from available seats on the bus. This lets the user pick their favorite seat for the journey.

After selecting the seats, the user clicks Done, which takes them to the Payment Screen.

WIREFRAME 4 – PAYMENT

The Payment Screen lets the user finish the booking process by choosing a payment method that works for them.

The available payment options include:

- Credit/Debit Card
- Pay Offline
- Google Pay (GPay)

The user picks their preferred payment method and then clicks the Proceed to Pay button to complete the transaction.

Booking Confirmation :-

After the payment goes through, the system shows a confirmation message indicating that the ride has been successfully booked. At this point, a QR code is created for the booked ride. This QR code can be used for ticket verification when boarding the bus.

When the user clicks the Close option on the confirmation screen, they are taken back to the Homepage of the application.

RESULT:

The task analysis and user flow design successfully identified the important user interactions in the online shopping application. The wireframes provided a clear structure for navigation and improved usability.
