USER INTERFACE AND DESIGN

Design of Food Ordering UI using RAD Model in Axure

AIM

To simulate the lifecycle stages of UI design using the RAD model and develop a small interactive interface.

OBJECTIVE

To design and simulate a simple food ordering application interface using the RAD model.

RAD MODEL STAGES

1. Requirements Planning

- The application allows users to log in and order food items.
- Users can view available food items and confirm their order.

2. User Design

- Designed user interface screens:
 - Login Screen
 - Home Screen (Food Selection)
 - Order Confirmation Screen
- Used UI components like text fields, buttons, and labels.

3. Construction

- Developed interactive prototype using Axure:
 - Login button navigates to Home Screen
 - Selecting a food item leads to Order Confirmation Screen
- Implemented navigation using OnClick interactions.

4. Cutover

- Tested the prototype using preview mode
- Verified smooth navigation between screens
- Ensured correct display of selected item

SYSTEM DESIGN

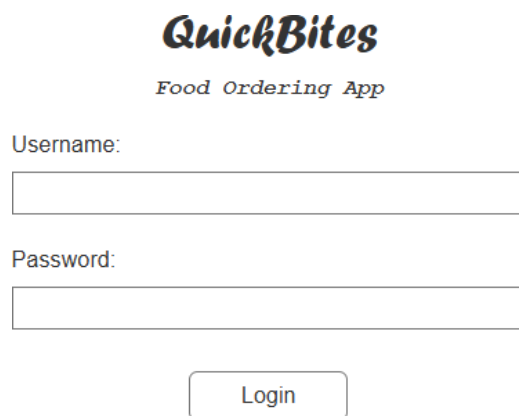

Pages Included:

- Login Page
- Home Page
- Order Confirmation Page

Features:

- User login interface
- Food item selection
- Order confirmation display
- Interactive navigation

LOGIN PAGE

The login page features the 'QuickBites' logo in a stylized, bold, black font, with 'Food Ordering App' written in a smaller, italicized font below it. Below the logo, there are two input fields: one for 'Username:' and one for 'Password:'. Both fields are rectangular with a thin border. Below the password field is a rounded rectangular button labeled 'Login'.

QuickBites
Food Ordering App

Username:

Password:

Login

Purpose:

The Login Page is the entry point of the application where users provide their credentials to access the system.

Components Used:

- **Label** – Displays application name *QuickBite*
- **Text Field** – For entering username
- **Password Field** – For entering password securely
- **Button (Login)** – To submit user details

Functionality:

- When the user clicks the **Login button**, the system navigates to the Home Page.

Design Focus:

- Simple and user-friendly layout
- Proper alignment of input fields
- Clear visibility of login button

HOME PAGE (FOOD SELECTION PAGE)

WELCOME TO QUICKBITES

	Biryani Rs. 550	ADD
	Burger Rs. 250	ADD
	Pie Rs. 450	ADD
	Pizza Rs. 590	ADD
	Spaghetti Rs. 320	ADD
	Tiramisu Rs. 340	ADD

Purpose:

The Home Page displays available food items and allows users to select an item for ordering.

Components Used:

- **Label** – Displays welcome message (e.g., “Welcome to QuickBite”)
- **Rectangles/Cards** – Represent food items
- **Labels** – Show food name and price
- **Buttons (Order/Add)** – Used to select a food item

Functionality:

- Each food item has an associated **Order button**
- When the user clicks a button:
 - The selected item is processed
 - The system navigates to the Order Confirmation Page

Design Focus:

- Clear display of food items
- Easy-to-click buttons
- Organized layout for better user experience

ORDER CONFIRMATION PAGE

Order Confirmed!!

Your food is on the way...

Back to Home

Log out

Purpose:

This page confirms the user’s selected food item and completes the ordering process.

Components Used:

- **Label** – Displays confirmation message (e.g., “Order Confirmed”)
- **Label** – Displays selected food item
- **Button (Back/Home)** – Allows user to return to Home Page

Functionality:

- Displays the selected food item
- Confirms that the order has been placed successfully
- Provides navigation back to the Home Page

Design Focus:

- Clear confirmation message
- Visibility of selected item
- Simple and clean layout

RESULT

The food ordering interface was successfully designed using the RAD model and provided smooth user interaction. Users can log in, select food items, and view order confirmation.
