USER INTERFACE AND DESIGN

Low-Fidelity Paper Prototypes and Digital Wireframes for Banking App

AIM

To develop low-fidelity paper prototypes for a banking application and convert them into digital wireframes.

OBJECTIVE

- To design paper prototypes for a banking app.
- To convert sketches into digital wireframes.
- To improve navigation and usability through prototyping.
- To understand the UI design process in HCI.

DESCRIPTION

The experiment includes designing banking app screens first as hand-drawn paper prototypes and later converting them into digital wireframes.

Low-Fidelity Paper Prototypes

Paper prototypes were created using simple sketches to represent:

- Buttons
- Input fields
- Navigation flow
- Screen layout

These prototypes helped in quick design planning and idea visualization.

Screens Designed

1. Login Screen

2. Home Dashboard

3. Accounts Screen

4. Transfer Money Screen

A hand-drawn wireframe of the 'Transfer Money' screen. It features a back arrow and the title 'Transfer Money' at the top. Below the title, there is a 'To' label followed by a text input field with the placeholder 'Enter Mobile/Account Number'. This is followed by an 'Amount' label and a text input field with '₹ 0.00'. Below that is a 'Remarks (optional)' label and a text input field with the placeholder 'Enter remarks'. At the bottom is a 'Proceed' button.

A digital wireframe of the 'Transfer Money' screen. It features a back arrow and the title 'Transfer Money' at the top. Below the title, there is a 'To' label followed by a text input field with the placeholder 'Enter Mobile/Account Number'. This is followed by an 'Amount' label and a text input field with '₹ 0.00'. Below that is a 'Remarks (optional)' label and a text input field with the placeholder 'Enter remarks'. At the bottom is a blue 'Proceed' button.

5. Transaction History Screen

A hand-drawn wireframe of the 'Transactions' screen. It features a back arrow and the title 'Transactions' at the top. Below the title is a table with five rows of transaction data.

Date	Description	Amount
01 May	Grocery	- ₹ 1,200
30 Apr	Salary	+ ₹ 50,000
28 Apr	Electricity Bill	- ₹ 1,000
25 Apr	Online Shopping	- ₹ 2,500
20 Apr	Mobile Recharge	- ₹ 500

A digital wireframe of the 'Transactions' screen. It features a back arrow and the title 'Transactions' at the top. Below the title is a table with five rows of transaction data, each with an icon representing the transaction type.

Date	Description	Amount
01 May	Grocery	- ₹ 1,200
30 Apr	Salary	+ ₹ 50,000
28 Apr	Electricity Bill	- ₹ 1,000
25 Apr	Online Shopping	- ₹ 2,500
20 Apr	Mobile Recharge	- ₹ 500

Digital Wireframes

The paper sketches were converted into digital wireframes with:

- Structured layouts
- Better alignment
- Icons and navigation bars
- Improved visual clarity

HCI Principles Used

- Consistency
- Simplicity
- Visibility
- User-friendly navigation
- Feedback

Methodology

1. Analyze banking app requirements.
2. Draw low-fidelity paper sketches.
3. Design screen navigation flow.
4. Convert sketches into digital wireframes.
5. Evaluate usability and interface clarity.

Result

The banking app prototype was successfully designed using paper sketches and digital wireframes. The digital version provided better usability and improved screen organization.
