USER INTERFACE AND DESIGN

Storyboard Design for Online Shopping App

Aim

To design a storyboard for an online shopping application using Balsamiq Wireframes, focusing on user flow and interface layout for an iPad device.

Objective

- To understand user interaction flow in an e-commerce app
- To design low-fidelity wireframes for key screens
- To represent navigation between screens clearly

Application Overview

The application, named **EazyBuy**, is an online shopping platform designed for tablet users. It allows users to browse products, view details, and place orders through a structured and user-friendly interface.

Storyboard Description

Screen 1: Home Screen

- Displays app name “EazyBuy”
- Includes menu, cart, and profile icons
- Shows current location and search bar
- Product banners and category options (Fashion, Electronics, Furniture)

User Action:

User browses products or searches for items.

Screen 2: Navigation Menu

- Side menu appears when menu icon is clicked
- Options: Account Settings, Support, License, Sign Out

User Action:

User accesses account-related features.

Screen 3: Product Listing (Category View)

- Displays selected category (e.g., Fashion)
- Shows list/grid of products

User Action:

User selects a product to view details.

Screen 4: Product Details

- Displays product image and name (Floral Frock)
- Shows price, rating, and description
- Includes quantity selector and “Order” button

User Action:

User reviews product and adds it to cart.

Screen 5: Order Confirmation

- Displays “Order Completed” message
- Shows total amount and payment status
- Includes “Back to Home” button

User Action:

User confirms purchase and returns to home screen.

User Flow

Home Screen → Category Selection → Product Listing → Product Details → Order Confirmation

Features Highlighted

- Simple navigation using menu and icons
- Search functionality for quick access
- Category-based product browsing
- Product details with ratings and pricing
- Order confirmation with payment status

Conclusion

The storyboard effectively represents the workflow of an online shopping application. It demonstrates a clear and logical user journey from browsing products to completing a purchase. The use of tablet-based layout improves usability by providing a structured and spacious interface.

Result

The storyboard successfully represented the complete user flow of the online shopping application and improved understanding of user interaction and navigation.
